ibular output not generated.

Title:
Description:
Perfect Score:
Sequence: >US-08-599-226-30 (1-12) from US08599226.pep 69 1 ASYLSTSSSLDD 12

Scoring table: PAM 150 Gap 15

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: pir60 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 23.804; Variance 27.163; scale 0.876

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This enzyme is thermotolerant and metal ions resistant protein. It is also stable for the industrial preparation of di-D-fructofuranose 1,2':2,3' dianhydride. It converts inulin into di-D-fructofuranose 1,2':2,3' dianhydride through

Title: >US-08-599-226-30 Description: (1-12) from US08599226.pep Perfect Score: 69
Sequence: 1 ASYLSTSSSLDD 12

Searched: 179066 seqs, 54579741 residues

Scoring table:

PAM 150 Gap 15

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

Statistics: Mean 23.424; Variance 25.983; scale 0.902

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ibular output not generated.

Title: Description: Perfect Score: >US-08-599-226-30 (1-12) from US08599226.pep 69 1 ASYLSTSSSLDD 12

Sequence:

Scoring table: PAM 150 Gap 15

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37 1:swissprot

Statistics: Mean 24.293; Variance 24.652; scale 0.985

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                   determining region 3 (CDR3).

The Ab dissociates from TNP-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less and has a Koff rate constant of 1x10 power -3 s power -1 or less and has a Koff rate constant of 1x10 power -3 s power -1 or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNP-alpha cytotoxicity in a standard in vitro 1929 assay with an ICS0 of 1x10 power -7 M or less The Ab, which inhibits TNP-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiaco or inflammatory bone disorders, bone resorption disease, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cell leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
